SKIN REJUVENATION WITH INTENSE PULSED LIGHT (IPL) SKIN TREATMENTS USING THE PHOTO REJUVENATION PROCESS REPRESENTS A BREAKTHROUGH IN AGE-DEFYING SKIN CARE. THIS TECHNIQUE TREATS SKIN DAMAGE NON-INVASIVELY. THERE IS MINIMAL DISRUPTION OF THE SKIN’S EPIDERMAL SURFACE. IPL TREATMENTS ADDRESS THE EFFECTS OF PHOTO AGING AND SUN DAMAGE WITH LOW RISK OF COMPLICATIONS AND NO RECOVERY TIME.

Rejuvenate! Achieve Beautiful Skin uses the Advanced Technology System. This FDA-cleared, patented technology provides dramatic results for a variety of benign conditions, including age spots, sun-induced freckles, symptoms of rosacea, birthmarks, unsightly veins, acne scarring and other blemishes.

Why choose IPL over other treatment options for skin rejuvenation? Laser resurfacing and deep chemical peels often send patients into hiding, as they wait for redness, swelling, and crusting to subside. Facelifts and other surgical procedures are far too invasive for younger patients and “baby boomers” who simply want to revitalize their appearance without recovery downtime.

IPL can also be used as part of Photo Dynamic Therapy for a variety of conditions, including pre-cancerous Actinic Keratosis. A series of 5 treatments at 3-4 week intervals is recommended for optimum results.

IPL treats the damaged superficial layer of the skin, while delivering thermal energy to deeper tissue. Clinical studies support a positive effect on collagen production, which helps firm and tighten the skin.
